

James Street Steel will assume responsibility for its business and production practices and for CO2 emissions resulting from these activities. This responsibility will be performed by , the following guidelines:

- James Street Steel will make efforts to mitigate climate change.
- James Street Steel will seek to reduce annual greenhouse gas emissions by eliminating unnecessary emissions, improving energy efficiency, and maintaining climate responsibility through its actions. This will improve the company's carbon footprint.
- James Street Steel will ensure that related business activities, such as purchasing or transportation activities, are consistent with the intentions set forth in this statement.
- James Street Steel will seek solutions that lead to meaningful investments that will result in a reduction of greenhouse gas emissions.
- James Street Steel will introduce a system for annual monitoring and reporting of greenhouse gas emissions. This system must be consistent, accurate and transparent.
- James Street Steel will clearly communicate its corporate policy, emission reduction targets and achieved reductions.
- James Street Steel will make efforts to involve business partners, customers, suppliers, and employees in positive climate behaviour.
- James Street Steel will seek to annually improve the calculations of the carbon footprint, as well as to get the most accurate source data for these calculations.
